Corte horizontal guia para cortina común.

Corte horizontal guia para cortina barro.

Vista Lateral

**Cantidad de tablillas:**

Altura carpintería (mm.) / 55 + 1 de 11777

**Ejemplo:**

Una ventana de 1200 mm. de alto sería:

$1200 / 55 = 21.8$  (22 tablillas) + 1 de 11777

Total: 22 Tablillas 12626 y 1 Tablilla 11777

### Cortina Común

Cortina Barrio

H  
(Alto carpintería)

## Cortina Barrio

NOTA: En ningún caso la última tablilla de cortina en posición abierta, debe sobrepasar la altura de la ventana.  
En caso de reemplazar una cortina existente verificar estas medidas.

Escala 1:2

Desagües para marco 2 guías

NOTA:  
-Los mecanizados A y B se realizan con punzonadora.

Mecanizado de jamba y encuentro de hoja (12003 y 12004)

12003

12004

Realizado con punzonadora  
(ver hoja 11.05 - 11.06)

Mecanizado de jamba y encuentro de hoja (99053 y 99054)

99053

99054

Realizado con punzonadora  
(ver hoja 11.05 - 11.06)

## Mecanizado para rueda de mosquitero

12005

## Mecanizado para desagüe de paño fijo y ventana de abrir

10329 / 99907

Realizado con copiadora

NOTA: La separación máxima entre mecanizados no debe ser superior a 500 mm.

## Mecanizado para desagüe de travesaño

10328 / 99904

Realizado con copiadora

NOTA: La separación máxima entre mecanizados no debe ser superior a 500 mm.

## Mecanizado de travesaño

10328 / 99904

Realizado con copiadora o  
con retestadora mediante uso  
de fresa provista por OK  
Industrial

Mecanizado para zocalo y cabezal de puerta (perfil 14030 y 11577)

Realizado con perforadora

## Mecanizado para zocalo y cabezal de puerta (perfil 11252)

Mecanizado para cerradura de puerta (CE001)

14030

11577

Realizado con copiadora

Este mecanizado es válido solamente para la cerradura CE001

Mecanizado para cerradura de puerta (CE002)

DIMENSIONES

## Dimensiones máximas para ventana corrediza

A) 12004

$$J_{xx} = 4.2 \text{ cm}^4$$

B) 99054

$$J_{xx} = 7.6 \text{ cm}^4$$

Presión de viento: 60 Kg/m<sup>2</sup>

Presión de viento: 80 Kg/m<sup>2</sup>

Presión de viento: 100 Kg/m<sup>2</sup>

Los tamaños de hoja por debajo de la curva para cada caso cubren las necesidades estáticas.

Además de verificar las dimensiones máximas para cada abertura, es necesario calcular el peso de la hoja según el vidrio seleccionado, para saber la limitación del rodamiento a usar.

Estos cálculos están realizados en forma teórica (no sustituyen a los cálculos estructurales para cada obra), basándose en la norma IRAM 11507-1, utilizando vidrio simple y una deflexión máxima de L/200 con un máximo de 15 mm (L = Alto de abertura).
